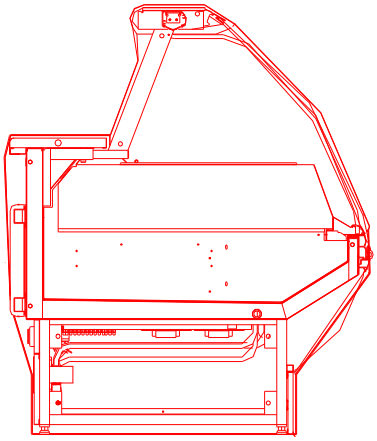
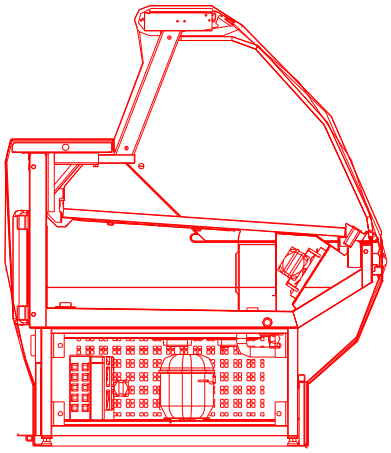
1. Models ....3
2. General Characteristics ....4
3. Condensed water draining and electrical connection points. ....5
4. Control Panel ....7
5. Electrical Circuit Board ....8
6. Electrical Wiring Diagram ....10
7. Programming the Thermostat ....12
8. Main replaceable parts ....14
9. Attachments ....30

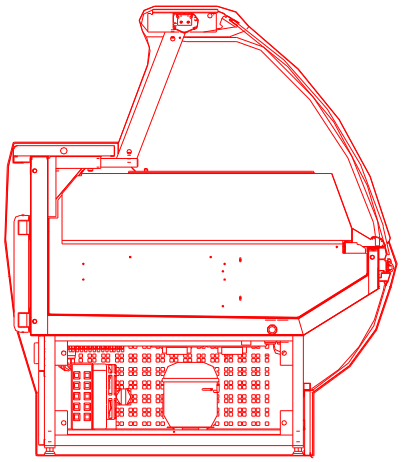
## 1. Models



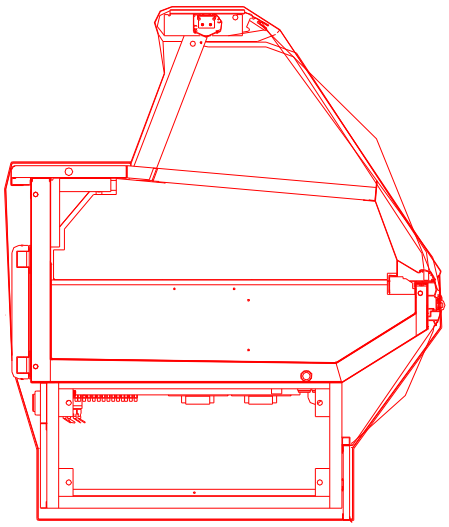
Water-bath



Refrigerator



Salads



Heated Cover (PATA)

**Note:** You can find technical information about these models on the attachment B. There you will be able to see their dimensions, too.

## 2. General Characteristics

### Water-bath

- With the help of a water-bath, the exposed products will be held warm (heating through resistance). This water-bath enables the containers that contain the food to be plunged into the water or to remain over a cover with holes, which is heated by the steam caused by the warm water (PABMV).
- An electro mechanic thermostat controller controls the temperature.

### Heated Cover

- In this display you can mainly expose food, which are held warm through heating resistances. An electro mechanic thermostat controls the heating temperature.

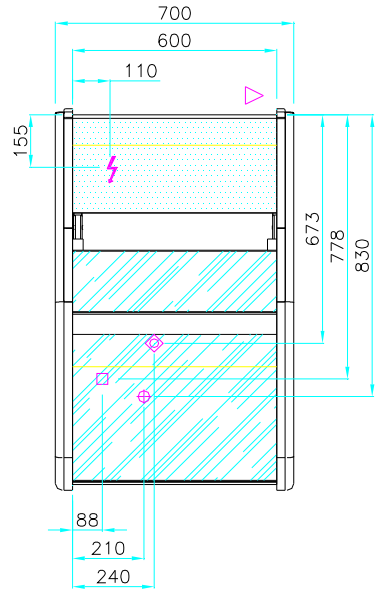
### Refrigerator

- In this display you can mainly expose pastry.
- The cold is ventilated and its temperature lays between 3℃ and 6℃ in an environment of 25° with 60% of relative humidity. A digital control unit controls the temperature.

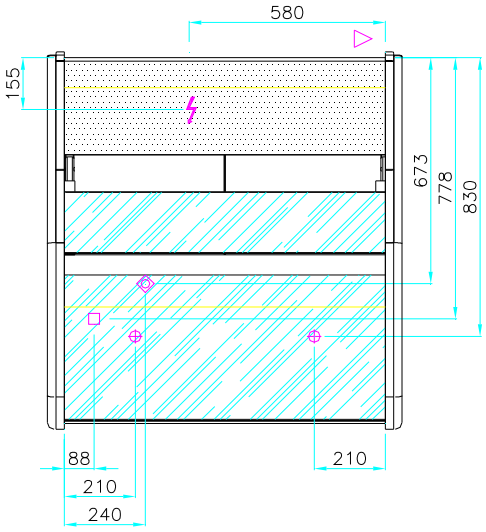
### Salad Refrigerator

- In this display you can mainly expose salads.
- The cold is ventilated and its temperature lays between 3℃ and 6℃ in an environment of 25° with 60% of relative humidity. A digital control unit controls the temperature.

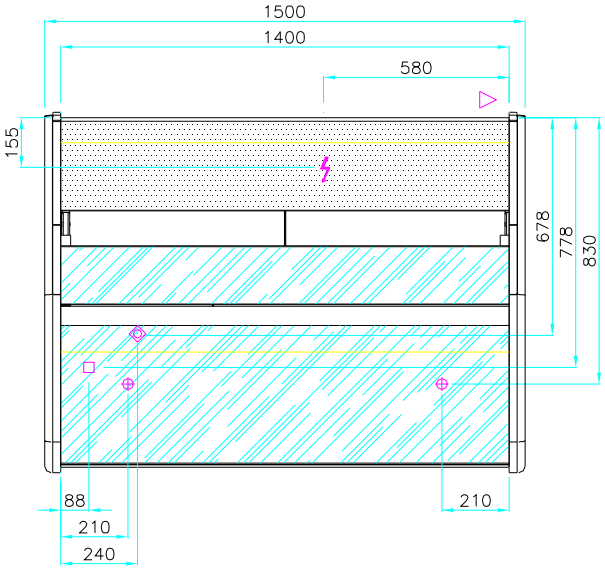
### 3. Condensed water draining and electrical connection points.



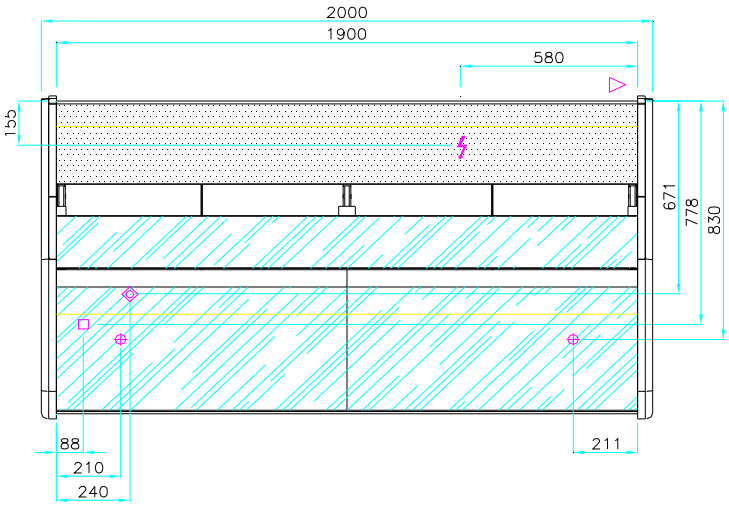
**Prestige 70**



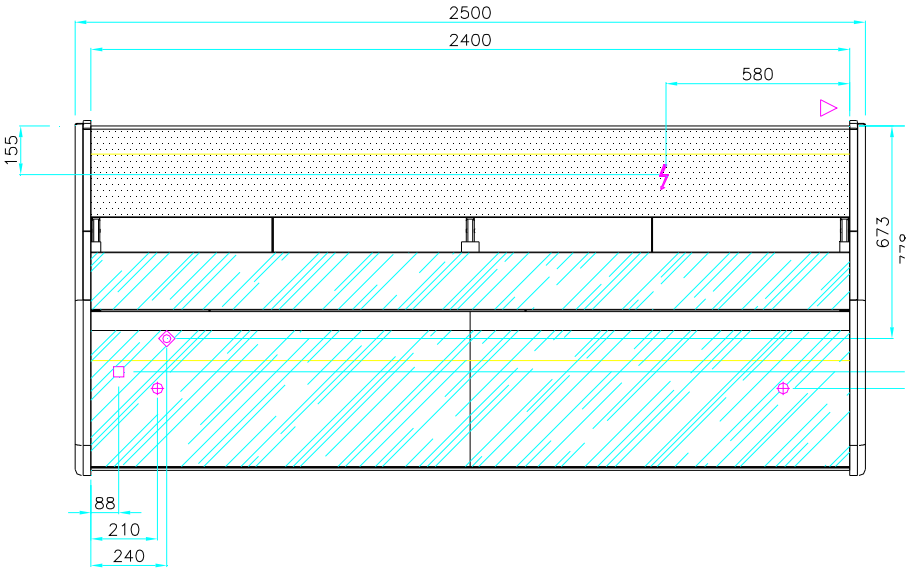
**Prestige 105**



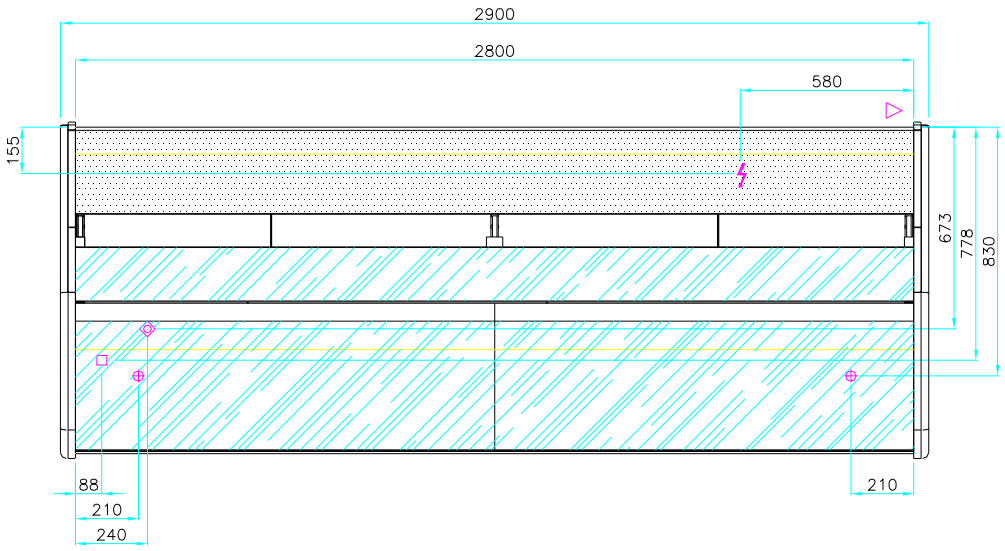
**Prestige 150**



**Prestige 200**



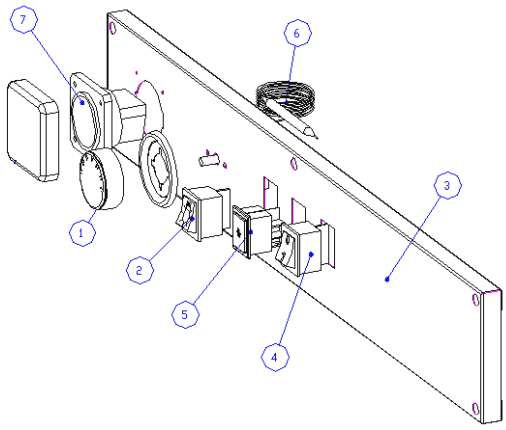
**Prestige 250**



**Prestige 290**

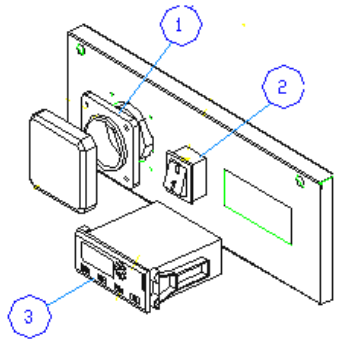
## 4. Control Panel

### Water-Bath / Heated Cover



1 – Thermostat
2 – Illumination switch
3 – Control Panel Base
4 – General switch
5 – Resistance connection indicator
6 – Thermostat temperature sensor
7 – Monophase socket 10-16A

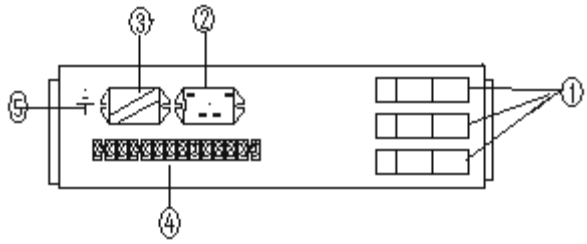
**Refrigerated Pastry / Refrigerate Salad**



1 – Socket 10-16 A
2 – Main switch with indicator (0/1)
3 – Digital control unit LAE LDU 152

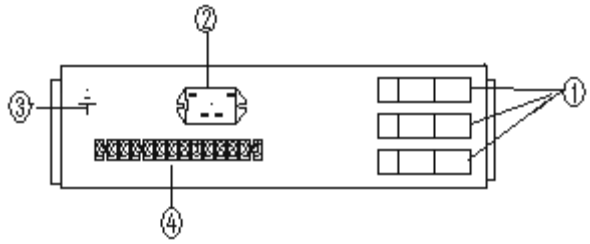
## 5. Electrical Circuit Board

**Water-Bath**



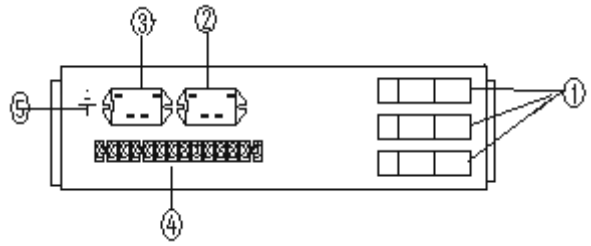
1 – Ballasts
2 – Heating resistance relay
3 – Circuit Breaker with Fuses
4 – Connection box
5 – Earth point

**Heated Cover**



1 – Ballasts
2 – Heating resistance relay
3 – Earth point
4 – Connection box

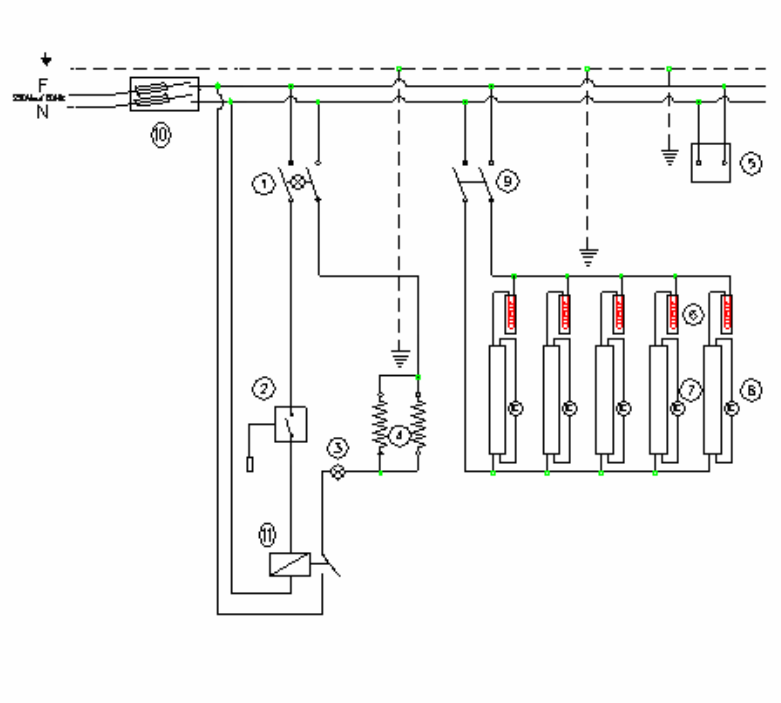
**Refrigerated Pastry / Salads**



1 – Ballasts
2 – Compressor relay (versions with compressor group)
3 – Evaporation kit relay (versions with evaporation kit)
4 – Connection box
5 – Earth point

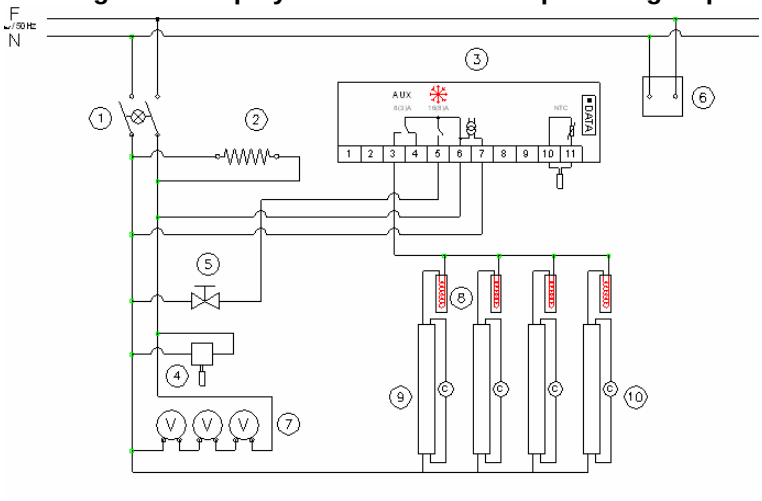
## 6. Electrical Wiring Diagram

### Water-bath and heated tray displays



**Key**
1 – Main switch with indicator
2 – Thermostat
3 – Resistance indicator
4 – Heating resistances
5 – 230v / 50HZ switch (16A)
6 – Ballast
7 – Lamp
8 – Starter
9 – Illumination switch
10 – Circuit breaker with fuses
11 – Heating resistance relay

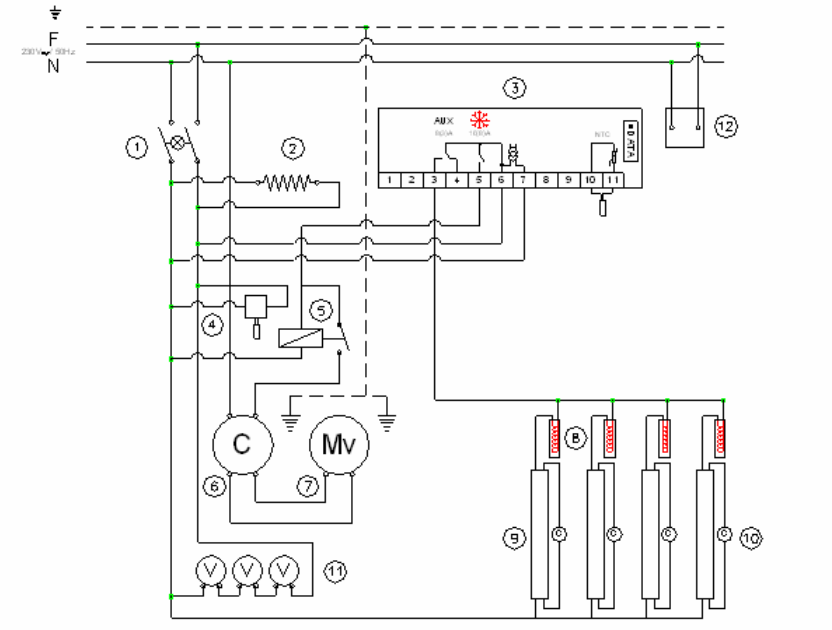
### Refrigerator and Salad Refrigerator Displays with distance compressor group



**Key**

1 – Main switch with indicator
2 – Anti-condensing resistance
3 – Digital control unit LAE LDU15
4 – Thermometer
5 – Solenoid valve
6 – Socket
7 – Fans
8 – Ballast
9 – Lamp
10 – Starter

**Refrigerator and Salad Refrigerator Displays with incorporated compressor group**



**Key**

1 – Main switch with indicator
2 – Anti-condensing resistance
3 – Digital control unit LAE LDU15
4 – Thermometer
5 – Compressor relay
6 – Compressor
7 – Compressor Fan
8 – Ballast
9 – Lamp
10 – Starter
11 – Fans
12 – Socket

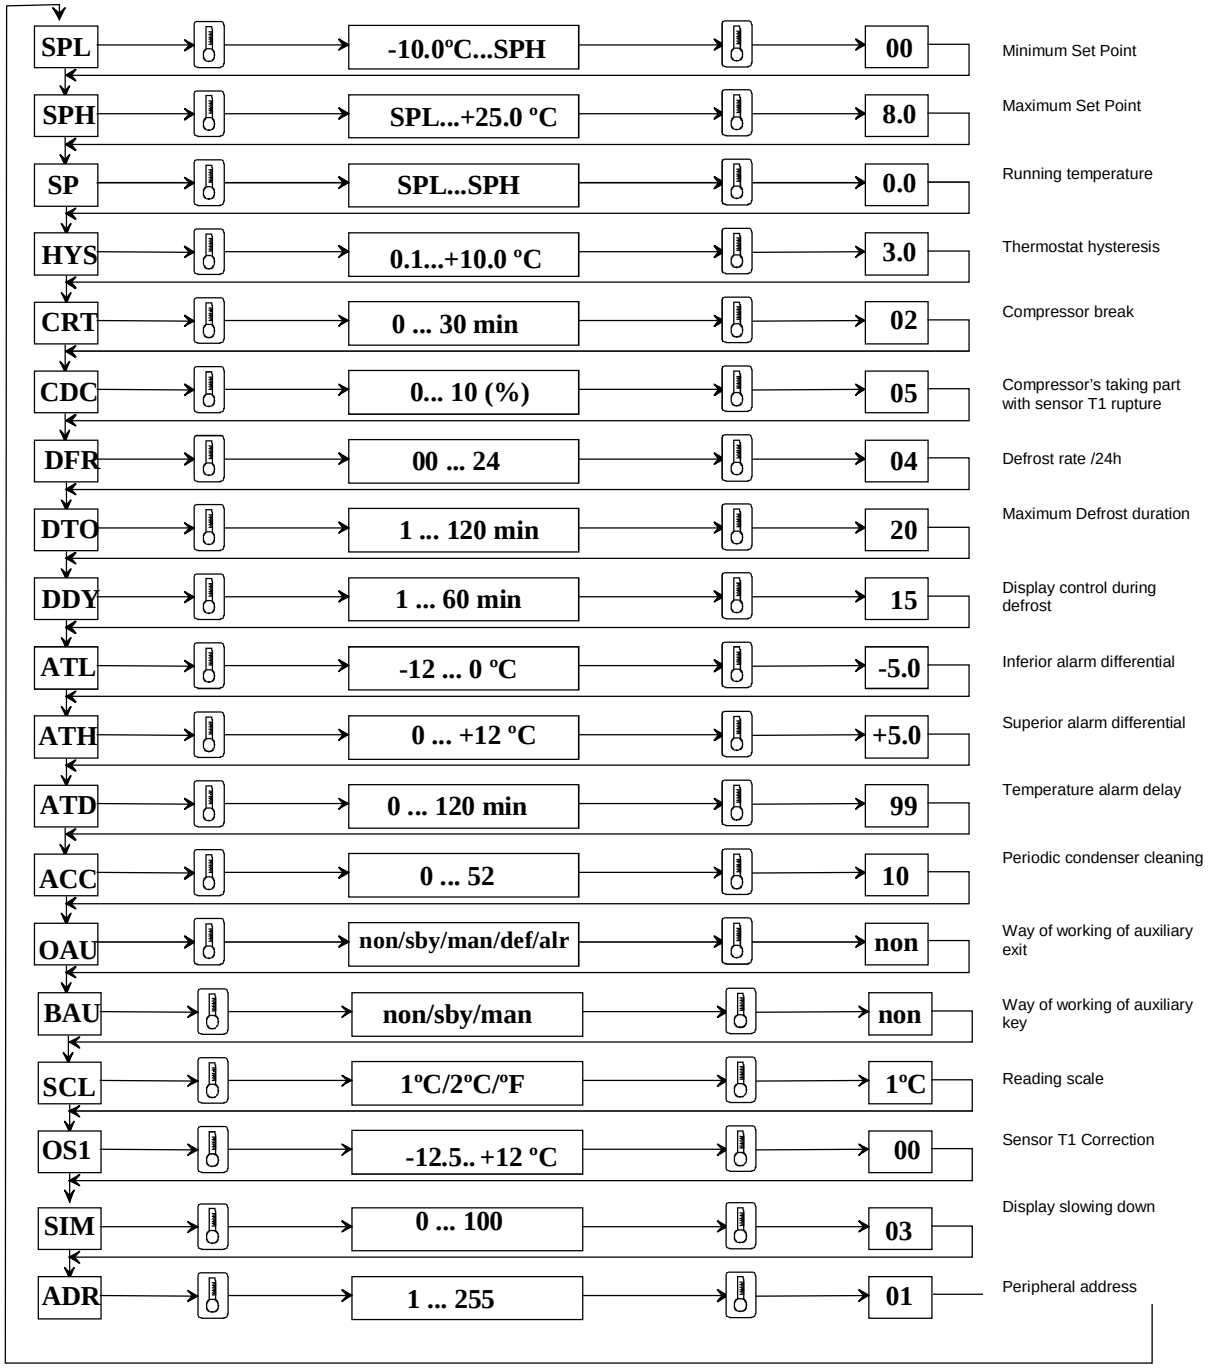
## 7. Programming the Thermostat

# Control Unit LAE LDU 152 – E – AS

Configuration

CUT-OUT TEMPERATURE 00

**PRESTIGE (VITRINAS e CANTOS) C\GP e S/GP**

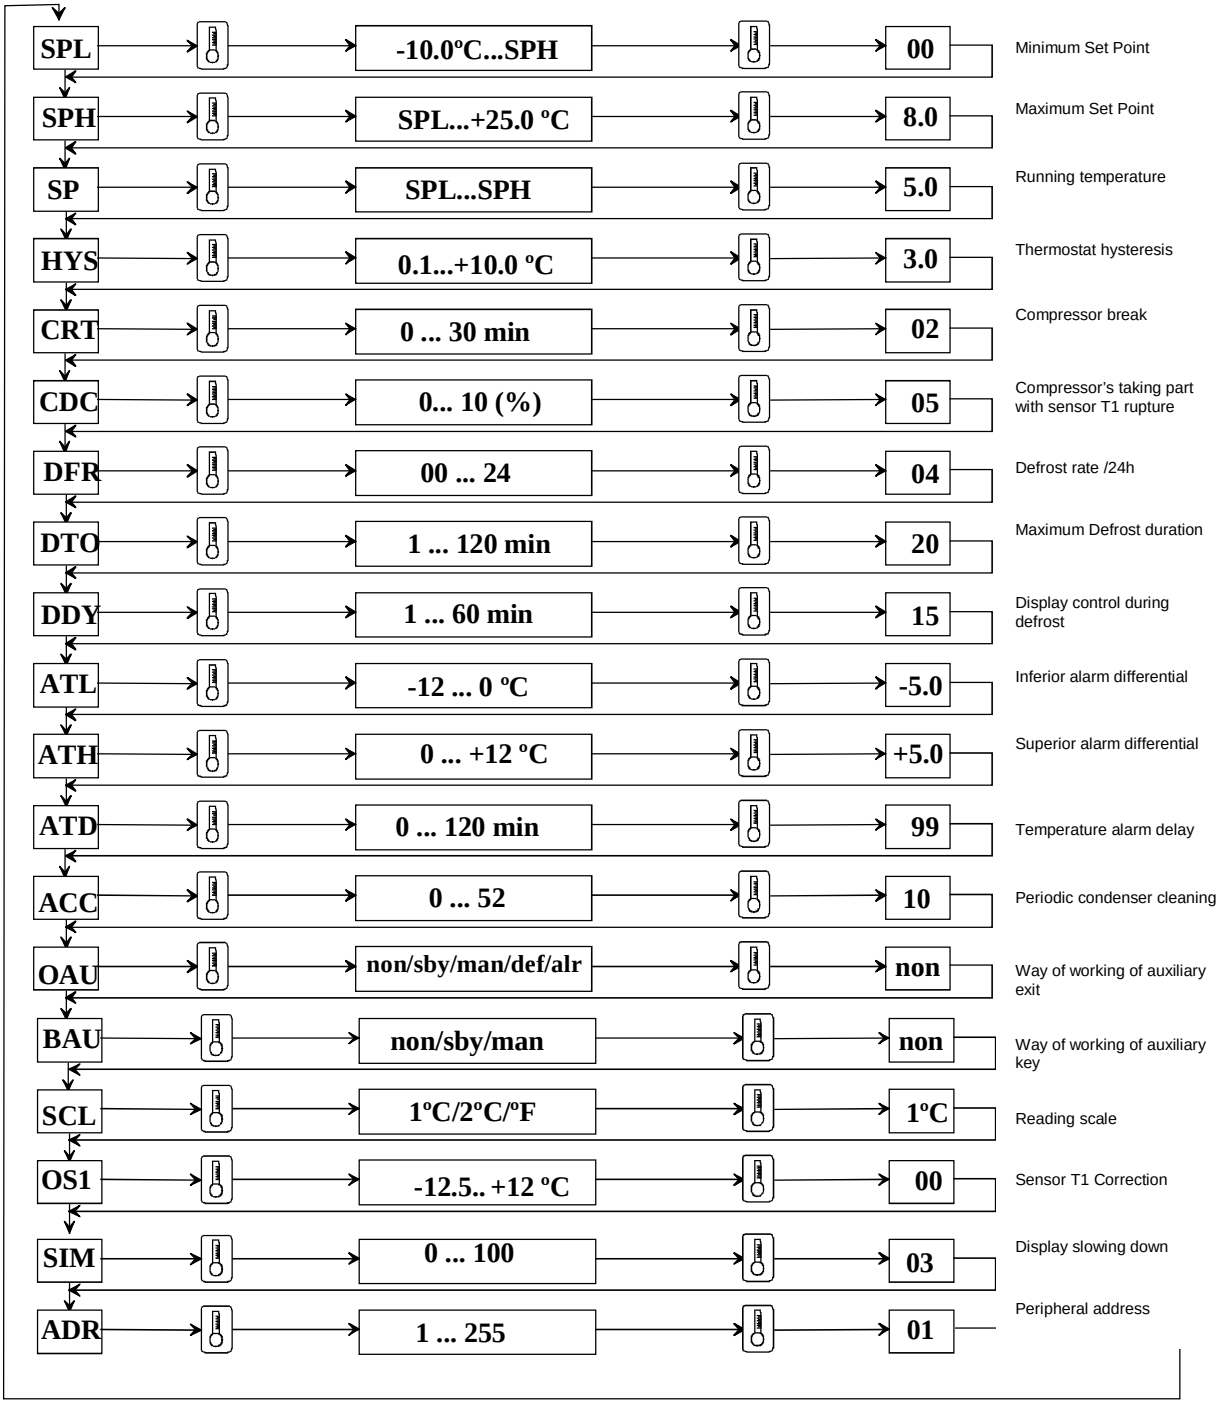


# Control Unit LAE LDU 152 – E – AS

Configuration

CUT-OUT TEMPERATURE 5.0

**PRESTIGE Saladas C\GP e S/GP**



## 8. Main replaceable parts

**Refrigerated Display – Back View**

## 9. Attachments

## Coupling / Uncoupling

The following step sequence shows you how to proceed when you want to couple a group of two or more displays. In the case you want to couple a box, the procedure is the same.

The uncoupling is done by doing the inverse sequence shown below.

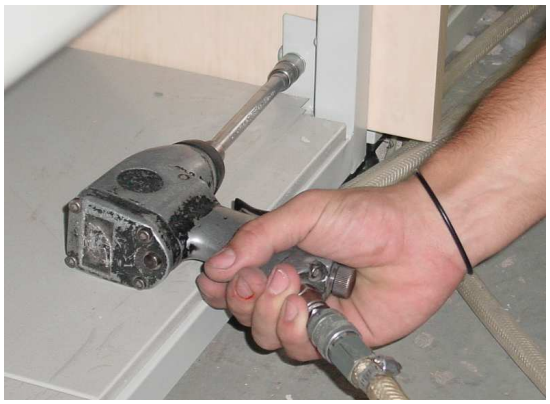
Example: the group **box and display A** was coupled to the **display B**

A

B

1. Place both displays laterally lined up and join them on the coupling point.

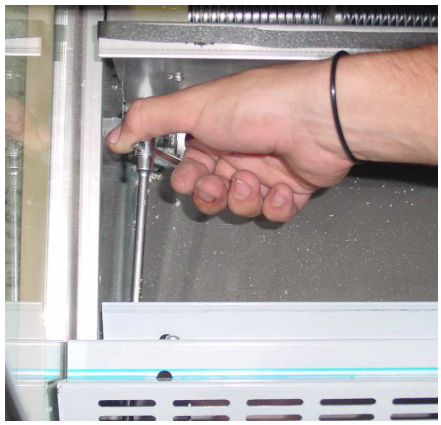
2. Level them, with the help of the levelling feet and of a spanner, and tighten the tab bolts indicated below.



3. Place and screw the finish band as described below.

4. Place the side glass, fix the supports with screws and place the cable protection band.

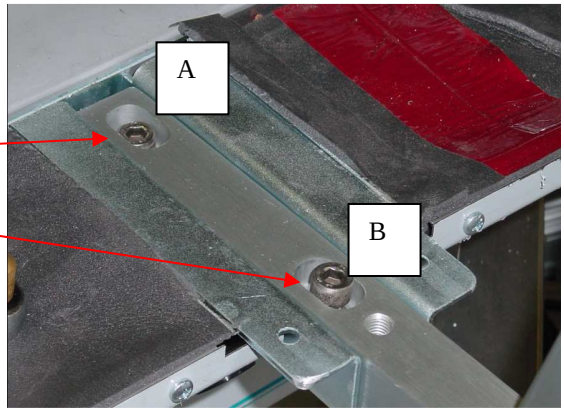
5. Fasten the screw, which you can find in the upper left corner on the display's front.



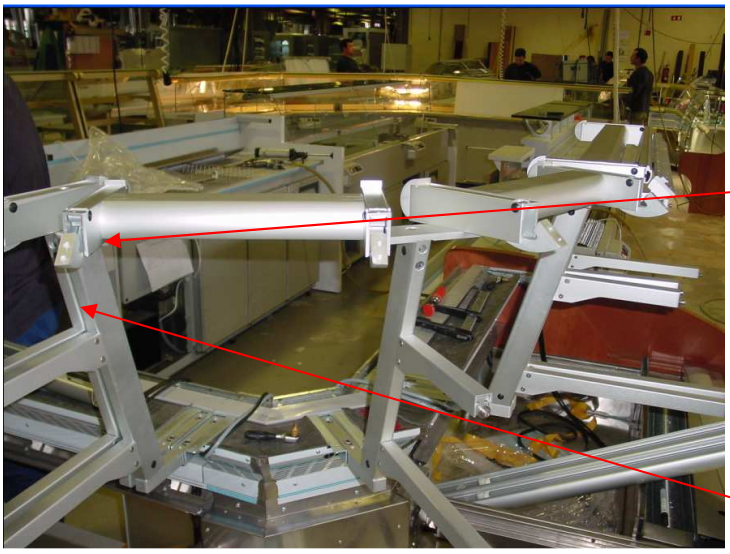
6. Place the fan's metal-foil and the cover, which closes the access to the fans.

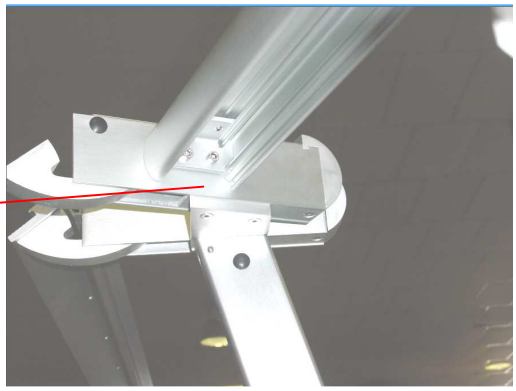
## Glass assembly and adjustment

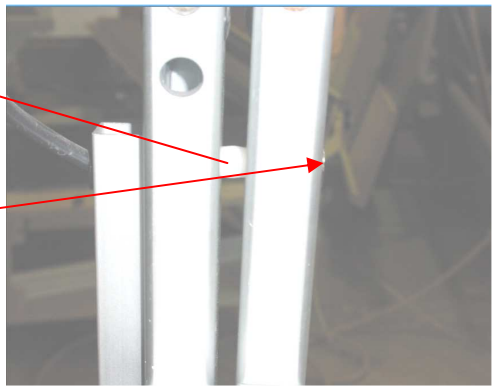
1. Tie the supports to the corner back fastening the screws (A) and (B).

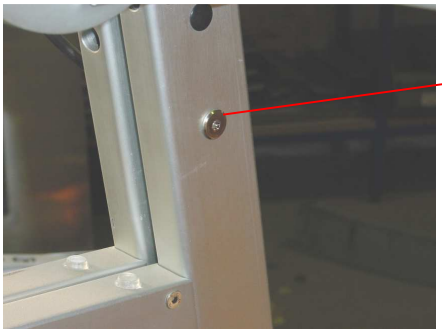


2. Place the upper lightning array and the support separation spangle as shown in the pictures below.



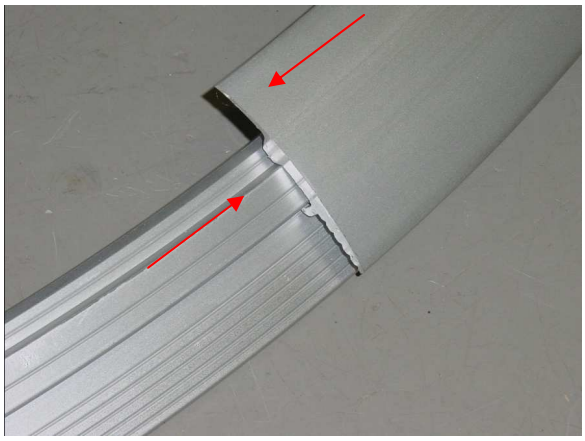




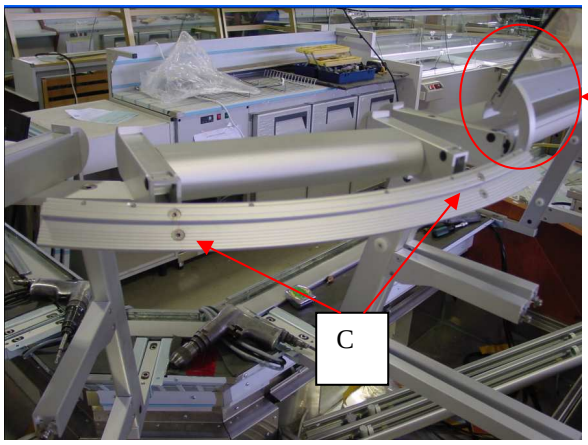


Support separation spangle maintenance screw.

3. Upper and lower glass fitting profiles. The arrows show you how they should be set together.

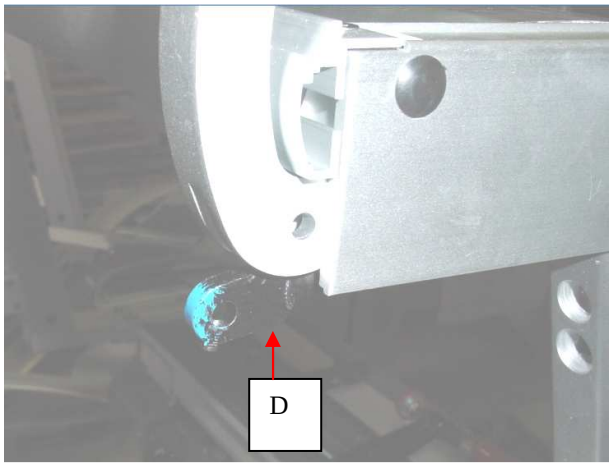


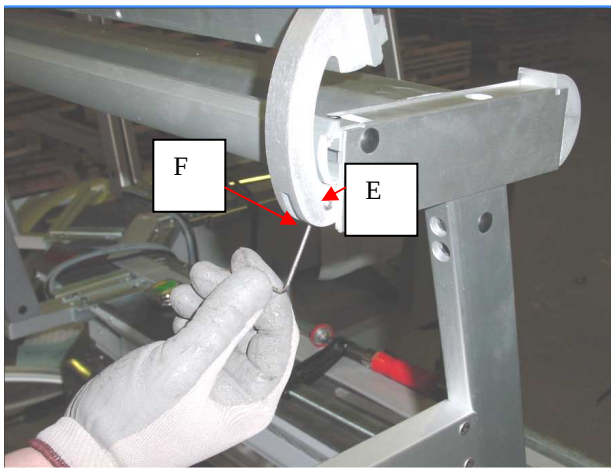
4. Tie the glass fitting profile to the support fastening it with the screws (C) as shown in the picture below.



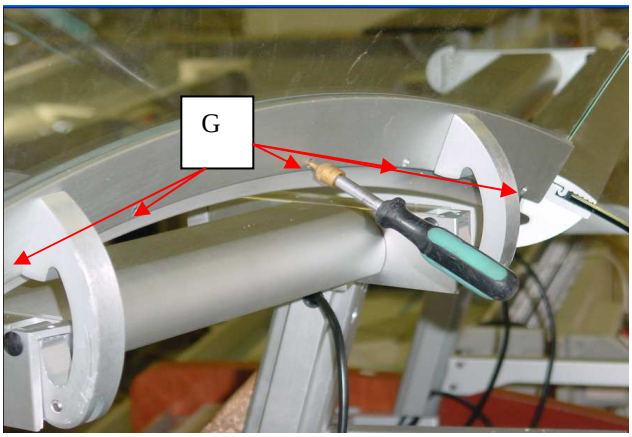
Detail of the base where the profile is tightened.

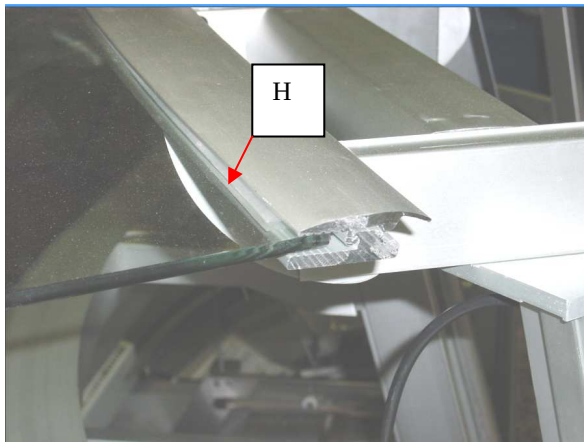
5. Place the hydraulic (D) on the support (leaning it against its back side and fastening it on the front using the fixing spangle (E) (fastened through a screw (F)).

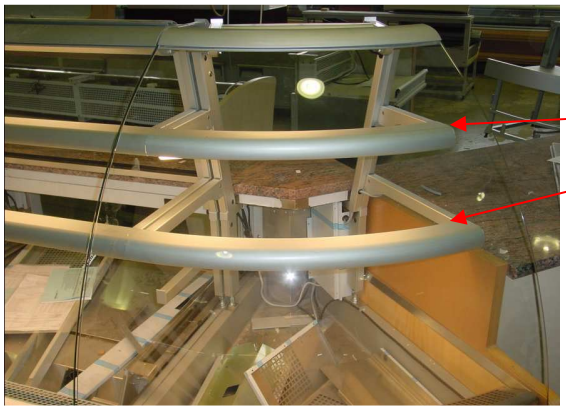


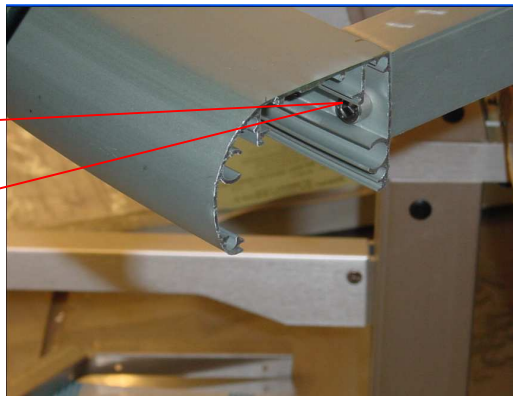


6. Place the glasses on the support profiles and fasten them using the screws (G). Don't forget to place the rubber profiles (H) to protect the glass!









7. Place the lower lighting arrays fastening them to the supports using the screws (I).
